

Pipeline to the FUTURE Delivering Safe, Renewable Geothermal Energy to Massachusetts

Wednesday, November 6, 2019

2:00 - 3:00 pm

As the earth warms at an accelerating rate, there is an urgent need to reduce carbon emissions—a main cause of this warming. The FUTURE bill is a comprehensive approach to move away from natural gas and toward a sustainable, safe, established source of energy for heating and cooling homes and buildings: geothermal micro districts.

Guest Speakers

Audrey Schulman, HEET (Home Energy Efficiency Team) Co-founder and Executive Director
Zeyneb Magavi, HEET Research Director
Senator Cynthia Creem, FUTURE Bill Senate Sponsor

They will discuss:

- Why it makes sense to transition to geothermal energy;
- How geothermal heating and cooling works compared with our current natural gas utilities model;
- How residents, businesses, and gas utilities will benefit from this transition; and
- How the FUTURE Bill will contribute to reducing carbon emissions and controlling gas leaks.

A question and answer period will follow the presentation.

Registration for the Webinar is Required.

- You must register in advance for this webinar, <http://bit.ly/FUTUREwebinar>
- After registering, you will receive a confirmation email containing information about joining the webinar.

Sponsored by the League of Women Voters of Massachusetts
